

**Teacher #8 (4th Grade)**

Having used Woot Math, what are your feelings about it?

I feel like it's pretty interactive and very engaging for students.

I'm familiar with the Rational Numbers Project and I really like the way they present the material. I very much like that Woot Math draws on that.

How helpful do you think it was for your students?

I think the ability to manipulate the model and be in control is extremely helpful. I like that the control of the modeling rests with the student, and I also liked that it was always there optionally for them to use.

Did you notice any changes in your students attitudes about the material or their self confidence during the program?

Often in math, students finish feeling defeated, so I think it was helpful that it left them feeling positive - that they could succeed and accomplish the task.
